

The Conversion Utility for Infor XA has been designed to dramatically reduce the time, effort and cost associated with a conversion to Infor XA. The Conversion Utility gives a simple and effective method for migrating data from other ERP systems as well as legacy mainframes and older proprietary software packages. Historically, software conversions required programmers to map fields and create cumbersome conversion scripts. This could be a long, expensive and sometimes inaccurate way of porting historical information to a new software package. The Conversion Utility for XA changes everything.

We have applied our extensive knowledge of Infor XA and systems conversions to develop a tool to dramatically simplify the migration process. This means you can implement XA faster and begin to realize an ROI sooner.

### **The Conversion Utility for Infor XA**

- Assures accuracy of historical and current data
- Dramatically reduces conversion time and cost
- Reduces the number of 'unknown variables' in the conversion process
- Provides end users with an accurate test environment for the new system

### **ABOUT CONVERSION UTILITY FOR INFOR XA**

The Conversion Utility for XA minimizes the need for custom-programmed conversion scripts associated with a major software conversion. The Conversion Utility provides a proven methodology for porting historical data from most legacy software programs and systems to Infor XA. The Conversion Utility makes the software implementation process more predictable and manageable by providing a tool to assure the integrity of the data in MAPICS ERP for iSeries. Ultimately, The Conversion Utility for Infor XA was designed to save time, money and ensure that your MAPICS ERP for iSeries implementation is a success.

## CONFERENCE ROOM PILOTING

Agility, Inc. has developed a unique implementation methodology called “Conference Room Piloting”. Conference Room Piloting has been designed to:

- Make implementations a series of predictable, controlled events
- Helps ensure an “on-time” implementation
- Ensure the success of every Infor XA conversion
- Provides “hands on” training using “real” data to help ensure user acceptance
- Reduces implementation expenses and helps provide quicker ROI

The Conversion Utility offers a nearly instantaneous, menu-driven update of the XA database to support the Conference Room Piloting Methodology.

Ask your Agility representative for more information regarding Conference Room Piloting.

### CONVERSION UTILITY TECHNICAL SPECIFICATIONS

- Will work with most software and systems
- Populates more than 75 files in Infor XA
- Allows you to map multiple external fields to a single Infor XA
- Tests for ‘holes’ in the conversion script to ensure the integrity of ported data
- Provides meaningful data for test environments to ensure user acceptance
- File must be an ‘externally described’ file on the iSeries
- System is highly configurable and can map text, dates, and numerical data

Ask your Agility Representative about The Conversion Utility for XA and other enhancements and utilities.

Agility, Inc. is a world class firm specializing in Enterprise Resource Planning (ERP) products for manufacturers and distributors.
